Operating Principles of the 30RAN Series

Refrigeration Cycle

At its core, the 30RAN chiller operates on a vapor-compression refrigeration cycle:

1. Compression: The screw compressor compresses refrigerant vapor, increasing its pressure and temperature.
2. Condensation: High-pressure refrigerant passes through the condenser, releasing heat to the ambient air.
3. Expansion: The refrigerant then passes through an expansion valve, reducing pressure and temperature.
4. Evaporation: Cold refrigerant absorbs heat from the chilled water loop, cooling the water.
5. Cycle Repeat: The refrigerant vapor returns to the compressor, continuing the cycle.

Understanding this cycle helps in troubleshooting and optimizing performance.

Control Systems

The 30RAN series features sophisticated control systems, often based on Carrier's proprietary ComfortNet™ or CCN controls:

1. Temperature Regulation: Maintains desired chilled water temperature with high precision.
