Introduction to Training and Development in Performance Management

Training and development are integral components of a comprehensive performance management system. While performance management focuses on assessing and improving employee performance, training and development serve as proactive tools to equip employees with the necessary skills and knowledge to meet and exceed performance expectations. Training typically refers to structured activities aimed at improving specific skills or knowledge related to an employee's current role. It is often short-term and targeted, such as learning a new software, mastering a process, or understanding compliance requirements. Development, on the other hand, encompasses broader activities aimed at the long-term growth of employees, preparing them for future roles or responsibilities. It includes leadership programs, career planning, mentorship, and ongoing education. Effective integration of training and development into performance management ensures that employees are not only evaluated based on their current output but are also supported in their growth journey, ultimately driving organizational success.
