This variety ensures comprehensive coverage and prepares students for different problem types they may encounter.

Key Strategies for Solving Trigonometric Equations

1. Understanding and Applying Trigonometric Identities

Identities are the backbone of solving trigonometric equations. Familiarity with identities such as:

- Pythagorean identities: $\sin^2\theta + \cos^2\theta = 1$
- Reciprocal identities: $\csc \theta = 1 / \sin \theta$, $\sec \theta = 1 / \cos \theta$, $\cot \theta = 1 / \tan \theta$
- Quotient identities: $\tan \theta = \sin \theta / \cos \theta$
- Double angle identities: $\sin 2\theta = 2 \sin \theta \cos \theta$, $\cos 2\theta = \cos^2\theta - \sin^2\theta$

Applying these identities simplifies complex equations, making them easier to solve.

2. Isolating the Trigonometric Function

The goal is often to isolate a single trigonometric function: - Rewrite the equation to have one trigonometric term - Use algebraic methods such as adding, subtracting, multiplying, or dividing to isolate the term - Convert between different trigonometric functions if needed

3. Solving for the Variable

Once the equation is simplified: - Solve for the basic trigonometric function - Find the inverse function (e.g., arcsin, arccos, arctan) to determine the general solutions - Remember to consider the domain restrictions of inverse functions

4. Finding General Solutions

Trigonometric equations are periodic: - Use the period of the functions to find all solutions - Express solutions in a general form, such as $\theta = \theta_0 + 2\pi n$ for sine and cosine, or $\theta = \theta_0 + \pi n$ for tangent - Identify principal solutions and then extend to all solutions using periodicity

Sample Exercises and How to Approach Them

Basic Example

Solve for x : $\sin x = 1/2$, where $0 \leq x < 2\pi$ Approach: - Recognize that $\sin x = 1/2$ at $x = \pi/6$ and $5\pi/6$ - Write the general solutions: - $x = \pi/6 + 2\pi n$ - $x = 5\pi/6 + 2\pi n$ - State solutions within the given interval: - $x = \pi/6, 5\pi/6$

Equation Involving Identities

Solve for θ : $2 \cos^2 \theta - 1 = 0$, where $0 \leq \theta < 2\pi$ Approach: - Recognize the identity: $\cos 2\theta = 2 \cos^2 \theta - 1$ - Rewrite: - $\cos 2\theta = 0$ - Solve for 2θ : - $2\theta = \pi/2 + \pi n$ - Find θ : - $\theta = \pi/4 + \pi n/2$ - Find specific solutions within the interval: - For $n = 0$: $\theta = \pi/4$ - For $n = 1$: $\theta = \pi/4 + \pi/2 = 3\pi/4$ - For $n = 2$: $\theta = \pi/4 + \pi = 5\pi/4$ - For $n = 3$: $\theta = \pi/4 + 3\pi/2 = 7\pi/4$
