Core Concepts in Abnormal Psychology According to Barlow

Definition and Nature of Abnormality

What Constitutes Abnormal Behavior?

In Barlow's framework, abnormal behavior is characterized by several criteria:

1. Deviance: Behavior that significantly deviates from societal norms.
2. Maladaptiveness: Behaviors that interfere with daily functioning.
3. Personal Distress: Experiences of significant emotional suffering.
4. Statistical Rarity: Behaviors that are uncommon within a population.

However, Barlow emphasizes that no single criterion is sufficient; rather, a combination provides a more accurate assessment.

The Biopsychosocial Model

An Integrated Approach

Barlow advocates for a biopsychosocial perspective, considering:

1. Biological Factors: Genetics, neurochemistry, brain structure.
2. Psychological Factors: Cognitive processes, emotional regulation, personality.
3. Social Factors: Cultural influences, social support, life stressors.

This model underscores that mental disorders are rarely attributable to a single cause but result from complex interactions.
