What is Remote Sensing?

Definition and Basic Concepts

Remote sensing refers to the science of acquiring information about Earth's surface features without direct contact. This is achieved through sensors mounted on various platforms such as satellites, aircraft, drones, or balloons that capture electromagnetic radiation reflected or emitted from the Earth's surface. 3. Spectral resolution: The ability to capture data across different wavelength bands.
4. Spatial resolution: The size of the smallest object that can be detected.
5. Temporal resolution: The frequency at which data is acquired over the same area.

Types of Remote Sensing Platforms
