Design and Build Quality

The Kinetico Model 60 Manual features a robust and well-engineered design that emphasizes longevity and ease of use. Its twin-tank configuration allows for continuous soft water supply by alternating between tanks, which means one tank is always in service while the other regenerates.

Materials and Durability

- Constructed with high-grade, corrosion-resistant resin tanks - Heavy-duty plastic and metal components built for long-term use - Designed to withstand harsh water conditions and physical wear

Size and Installation

- Compact footprint suitable for most residential spaces - Easy to install with standard plumbing connections - Requires minimal electrical setup due to its non-electric operation

Operational Mechanics and Functionality

The standout feature of the Kinetico Model 60 Manual is its manual regeneration process, which offers users greater control over water softening cycles. Unlike automatic systems, users initiate regeneration based on their water usage patterns.

How It Works

1. Water Softening: Water flows through the resin bed in the active tank, removing calcium and magnesium ions responsible for hardness. 2. Twin-Tank Operation: While one

tank is in service, the other prepares for regeneration. 3. Manual Regeneration: When needed, the user manually initiates regeneration, which involves rinsing the resin to remove accumulated minerals. 4. Switching Tanks: After regeneration, the system switches the active tank, ensuring continuous supply.

Advantages of Manual Regeneration

- Greater control over regeneration timing, potentially saving salt and water - Reduced unnecessary regeneration cycles - Increased lifespan of resin and system components
Pros: - Cost-effective in the long run - No reliance on electrical components, reducing potential points of failure - Suitable for users comfortable with manual operation
Cons: - Requires user involvement and awareness of water hardness levels - Potential for user error if regeneration is delayed or forgotten
