Scripting with GDScript

- GDScript is Godot's primary scripting language, similar to Python. - Scripts are attached to nodes to control behavior. - Example: Moving a sprite with a simple script.
extends Sprite func _process(delta): position.x += 100 delta

Physics and Collisions

- Use RigidBody2D, KinematicBody2D, or StaticBody2D for physics objects. - Add CollisionShape2D to define hitboxes. - Use signals like `body\_entered` for collision detection.

Advanced Features and Techniques in 2019

Animation System

- The AnimationPlayer node allows for timeline-based animations. - Keyframes can animate properties like position, rotation, or custom variables. - Use AnimationTree for complex state machines.

Visual Scripting and Shaders

- VisualScript offers node-based scripting for non-programmers. - The Shader editor enables effects like lighting, water, or stylized visuals.

Implementing UI and Menus

- Use Control nodes for UI elements. - Create Buttons, Labels, and Panels. - Connect signals for interactivity.
