Strategies for Using Keywords Effectively

Identifying keywords is just the first step. To maximize their usefulness, students should adopt strategies that integrate keyword recognition into a broader problem-solving approach.

1. Read the Problem Carefully

Always read the problem thoroughly before jumping to conclusions. Highlight or underline keywords as you go. Pay attention to context clues that may modify the usual operation associated with a keyword.

1. Categorize the Keywords

Create mental or written categories based on the keywords:

1. Does the problem involve combining amounts? Look for addition keywords.
2. Is it about finding what's left after some are taken away? Focus on subtraction terms.
3. Are quantities being scaled or repeated? Look for multiplication cues.
4. Is the problem splitting into parts or sharing? Focus on division indicators.

1. Use a Keyword-Operation Chart

Develop a personal reference chart that maps common keywords to their operations. When encountering a problem, consult this chart to guide your initial setup.

| Keywords | Operation |

|||

| Total, Sum, Combined | Addition |

| Difference, Less, Remaining | Subtraction |

| Product, Times, Multiplied | Multiplication |

| Quotient, Per, Out of | Division |

1. Translate Words into Symbols

Once the operation is identified, translate the keywords into mathematical symbols. For example, if the problem states "the sum of 8 and 12," write it as $8 + 12$.

1. Check for Multiple Operations

Some problems involve more than one operation. Look for multiple keywords indicating different operations and determine the order of operations (PEMDAS/BODMAS).

Examples of Keyword Identification in Word Problems

Example 1: Addition

"Sarah has 15 apples. She buys 7 more apples. How many apples does she have now?"

1. Keywords: "more" (implies addition)
2. Setup: $15 + 7 = 22$

Example 2: Subtraction

"There were 20 candies. After giving away 6 candies, how many candies are left?"

1. Keywords: "left" (indicates remaining), "after giving away" (implies subtraction)
2. Setup: $20 - 6 = 14$

Example 3: Multiplication

"A box contains 4 rows of chocolates, with 6 chocolates in each row. How many chocolates are there in total?"

1. Keywords: "rows" and "each" (suggest repeated addition / multiplication)
2. Setup: $4 \times 6 = 24$

Example 4: Division

"A total of 48 candies are divided equally among 8 children. How many candies does each child get?"

1. Keywords: "divided equally", "each"
2. Setup: $48 \div 8 = 6$

Advanced Tips for Recognizing Keywords

While the above keywords are common, some problems may use less straightforward language. Here are advanced tips:

1. Context clues matter: Words like "more than" can sometimes mean addition, but in some contexts, they may imply comparison.
2. Multiple keywords: Be attentive to problems that contain multiple keywords, which may indicate multi-step operations.
3. Units and labels: Pay attention to units (e.g., miles, dollars, hours) that can influence interpretation.
4. Question phrasing: Sometimes, the question's phrasing clarifies the operation. For example, asking "How many are left?" suggests subtraction.

Practice Exercise: Applying Keywords

Try identifying the operation in these problems:

1. "Tom has 9 marbles. His friend gives him 4 more marbles. How many marbles does Tom have now?"
1. "A car travels 60 miles in 1 hour. How far will it travel in 3 hours?"
1. "There are 24 students in a class. The teacher wants to split them into groups of 4. How many groups will there be?"
1. "Lina had \$50. She spent \$15 on groceries. How much money does she have left?"

Answers:

1. Addition ("more" implies adding 4 marbles)
2. Multiplication (distance per hour times hours)
3. Division (splitting into groups)

4. Subtraction (spent money; remaining money)

Conclusion: Mastering Keywords for Efficient Problem Solving

Recognizing and understanding keywords for math word problems is a vital skill that transforms complex language into clear mathematical operations. By familiarizing oneself with common keywords and developing strategies to identify them, students can approach word problems with greater confidence and clarity.
