Types of Cloud Deployment Models

Public Cloud

Resources are owned and operated by third-party providers and are available to the general public.

Private Cloud

Resources are used exclusively by a single organization, offering greater control and security.

Hybrid Cloud

A combination of public and private clouds, allowing data and applications to be shared between them.

Community Cloud

Shared among organizations with similar interests or requirements.

Cloud Service Models

Infrastructure as a Service (IaaS)

Provides virtualized computing resources over the internet. Users manage OS, applications, and data.

Platform as a Service (PaaS)

Offers a platform allowing users to develop, run, and manage applications without worrying about underlying infrastructure.

Software as a Service (SaaS)

Delivers software applications over the internet on a subscription basis.
