Understanding Linear Equations in One Variable

What Are Linear Equations?

Linear equations are algebraic expressions that involve variables raised to the first power, with no exponents, roots, or products of variables. They typically take the form: $ax + b = 0$ where: a and b are constants with $a \neq 0$, x is the variable to be solved for. Linear equations represent straight lines when graphed on the coordinate plane, which is why they are called "linear."

Examples of Linear Equations in One Variable

$3x + 5 = 0$ $-2x + 7 = 0$ $x - 4 = 0$ $5x = 20$ Each of these can be solved to find the value of x .
