

The Myers Way Comprehensive Elimination Diet

The Myers Way Comprehensive Elimination Diet is a strategic nutritional approach designed to identify food sensitivities and allergies that may be contributing to various health issues. Developed by Dr. Ben Lynch and popularized through the Myers Way program, this diet emphasizes removing potential irritants from the diet and then systematically reintroducing them to pinpoint problematic foods. This comprehensive approach can be a powerful tool for those suffering from chronic conditions, digestive problems, autoimmune disorders, or unexplained symptoms.

Understanding the Myers Way Comprehensive Elimination Diet

The Myers Way is more than just a typical elimination diet; it is a structured, science-backed process aimed at restoring optimal health by eliminating foods that could be causing inflammation, immune reactions, or gut imbalance. The diet is based on the premise that many health conditions are rooted in food sensitivities or intolerances, which often go undiagnosed with standard allergy testing.

Core Principles of the Diet

- Identify trigger foods through elimination and reintroduction. - Reduce systemic inflammation by removing inflammatory foods. - Support gut health to promote healing and proper digestion. - Restore nutrient absorption for overall wellbeing.

Key Components of the Myers Way Diet

The diet involves a phased approach, starting with strict elimination and gradually reintroducing foods to observe reactions. It emphasizes nutrient-dense, anti-inflammatory foods while avoiding common allergens and irritants.

Foods to Eliminate Initially

During the initial phase, the diet excludes:

1. Gluten-containing grains (wheat, barley, rye)
2. Dairy products (milk, cheese, yogurt)
3. Refined sugars and artificial sweeteners
4. Legumes (soy, peanuts, beans)
5. Nightshade vegetables (tomatoes, peppers, eggplants, potatoes)
6. Processed and packaged foods with additives or preservatives
7. Coffee and alcohol

This strict phase typically lasts from 2 to 4 weeks, allowing the body to detox and reduce inflammation.

Focus on Foods Allowed During Elimination

- Organic, grass-fed meats (beef, chicken, turkey) - Wild-caught fish (salmon, mackerel) - Non-starchy vegetables (broccoli, spinach, zucchini) - Healthy fats (olive oil, avocado, coconut oil) - Fermented foods (sauerkraut, kimchi) to support gut microbiome - Herbal teas and plenty of water

Phased Reintroduction and Testing

The core of the Myers Way is the reintroduction phase, which helps identify specific food sensitivities.

Step-by-Step Reintroduction

1. Single Food Testing: Reintroduce one eliminated food at a time, in small quantities. 2. Observation Period: Monitor for 3-5 days for any symptoms such as bloating, fatigue, skin reactions, or digestive discomfort. 3. Record Reactions: Keep a detailed food journal to track responses. 4. Confirmation: If symptoms return, that food is likely a trigger and should be avoided long-term. 5. Repeat: Continue reintroducing other foods in a systematic manner.

Duration of Reintroduction

Typically, each food is reintroduced over a 4-7 day period, ensuring sufficient time to observe delayed reactions. After testing all foods, a personalized diet plan can be created to avoid individual triggers.
