Sample Questions and Detailed Solutions

To better understand the typical questions found in Test 37, let's delve into some representative problems with step-by-step solutions.

Question 1: Find the measure of angle ABC if it is supplementary to angle DEF, which measures 125° .

Solution:

1. Recall that supplementary angles sum to 180° .
2. Given angle DEF = 125° , then angle ABC = $180^\circ - 125^\circ$.
3. Calculate: $180^\circ - 125^\circ = 55^\circ$.

Answer: Angle ABC measures 55° .

Question 2: In triangle PQR, side PQ = 8 cm, side QR = 6 cm, and side PR = 10 cm. Is triangle PQR a right triangle?

Solution:

1. Use the Pythagorean theorem to test for a right triangle: if the square of the longest side equals the sum of the squares of the other two, the triangle is right-angled.
2. Identify the longest side: PR = 10 cm.
3. Calculate: $10^2 = 100$.
4. Sum of squares of other sides: $8^2 + 6^2 = 64 + 36 = 100$.
5. Since $100 = 100$, the Pythagorean theorem holds.

Answer: Yes, triangle PQR is a right triangle with the right angle at Q.

Question 3: Find the circumference of a circle with a radius of 7 cm.

Solution:

1. Recall the circumference formula: $C = 2\pi r$.
2. Plug in the radius: $C = 2 \times \pi \times 7 = 14\pi$.
3. Approximate using $\pi \approx 3.14$: $C \approx 14 \times 3.14 \approx 43.96$ cm.

Answer: The circumference is approximately 43.96 cm.

Question 4: A rectangle has a length of 12 cm and a width of 5 cm. What is its area?

Solution:

1. Use the area formula for a rectangle: Area = length $\times$ width.
2. Calculate: $12 \text{ cm} \times 5 \text{ cm} = 60 \text{ cm}^2$.

Answer: The area of the rectangle is 60 square centimeters.

Question 5: Plot the points A(2, 3) and B(6, 7). Find the distance between them.

Solution:

1. Use the distance formula: $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$.
2. Calculate differences: $(6 - 2) = 4$, $(7 - 3) = 4$.
3. Compute: $d = \sqrt{4^2 + 4^2} = \sqrt{16 + 16} = \sqrt{32} \approx 5.66$.

Answer: The distance between points A and B is approximately 5.66 units.
