Sample Medication Competency Questions and Answers

1. How do you ensure the correct medication is administered to a patient?

Answer: To ensure the correct medication is administered, I follow the "Five Rights" of medication administration:

- **Right Patient:** Confirm the patient's identity using at least two identifiers, such as name

and date of birth. - Right Medication: Check the prescription and medication label against the medication administration record (MAR) or prescription chart. - Right Dose: Verify the prescribed dose and calculate it accurately if needed. - Right Route: Confirm the prescribed route of administration (oral, intravenous, topical, etc.). - Right Time: Administer the medication at the correct time as prescribed. Additionally, I double-check expiry dates, inspect the medication for any discoloration or damage, and ensure proper documentation post-administration.

2. What are the key considerations when handling controlled drugs?

Answer: Handling controlled drugs requires strict adherence to legal and safety protocols: - Store controlled drugs securely in a locked cabinet or safe. - Maintain accurate records of stock levels, including receipts, usage, and disposal. - Follow the “double-lock” system if mandated by local regulations. - Record every transaction, including administration and disposal, in a controlled drugs register. - Ensure only authorized personnel access these medications. - Be vigilant about potential misuse or diversion and report any discrepancies immediately. - Comply with all legal requirements, including documentation and auditing procedures.

3. How do you manage medication allergies or adverse reactions?

Answer: Before administering any medication, I review the patient’s allergy history and documented sensitivities. If a patient reports an allergy or adverse reaction: - I immediately stop administering the medication. - Notify the prescribing healthcare professional. - Observe the patient for any signs of an allergic reaction, such as rash, swelling, difficulty breathing, or anaphylaxis. - Provide appropriate emergency care if necessary. - Document the allergy and reaction thoroughly in the patient’s records. - Educate the patient about avoiding the allergen and inform relevant team members. - Review alternative medications if needed.

4. Describe the proper storage procedures for medications.

Answer: Proper storage of medications is vital for maintaining their efficacy and safety: - Store medications in designated areas according to manufacturer instructions (e.g., refrigeration for certain drugs). - Keep medications in a clean, dry, and secure environment away from direct sunlight and moisture. - Use clearly labeled storage cabinets or shelves. - Separate different classes of medications to prevent mix-ups. - Store controlled drugs under lock and key. - Regularly check expiry dates and dispose of expired medicines safely. - Maintain a clean storage area to prevent contamination.

5. How do you handle a medication error?

Answer: If I identify a medication error, I follow these steps: - Immediately assess the patient for any adverse effects or reactions. - Inform the supervising healthcare professional or pharmacist promptly. - Provide necessary emergency treatment if the patient is affected. - Document the incident clearly, including what occurred, the medication involved, and actions taken. - Report the error through the appropriate channels as per organizational policy. - Reflect on the incident to identify root causes and prevent future errors. - Participate in any debriefing or training sessions to improve practice.
